

introducing COPYblue

- remotely managed
- self service
- public use
- credit card based
- small footprint
- self service
- digital copier/fax
- A revolutionary concept in a multifunctional device designed specifically for the self-service environment.

Designed Specifically for the Hospitality Industry

What is revolutionary about a copier? Like our computer systems, the new self-service, credit card based GBCblue/Canon IR copiers are “remotely managed” meaning we monitor the copier 24/7 from our centrally located control center. The copiers “talk” to us letting us know if toner and paper trays are low, if they need service and locate trouble spots users may encounter so we can take a proactive approach to service and support, so you don’t have to. The IR series also has a built-in fax feature which allows guests to fax over the internet and receive confirmation via email when the fax is received. The GBCblue/Canon IR series has been designed specifically to simplify and enhance the user experience and be a hands-free service to you. Of course, all users have access to our 24-hour toll-free support line.
