GBCblue Introduces miniCOPYblue for Hospitality Industry

August 09, 2007 - GBCblue, a leading innovator and provider of ultra-secure, managed guest-use computer systems and related peripherals announced the debut of miniCOPYblue.

- Keeping track of inventory items
- Our software handles everything from barcoding to recipes
- We update your Point-of-Sale & financial systems while you sleep
- Interfacing with ALL major POS and AP systems!

Data Works

This mid-volume, self-service multifunction device, which works in both network-printing and stand-alone environments, is one of the first self-service print/copy/fax/scan-to-e-mail systems designed specifically for the hospitality industry.

The unit also allows guests to print select file types directly from their USB thumb drives. By accepting and processing all major credit cards or GBCblue prepaid cards, miniCOPYblue provides the hotelier with a low-cost, managed self-service solution while at the same time giving the guest one of the highest levels of security, privacy and reliability this type of equipment can provide. miniCOPYblue can be used in business centers or in stand-alone lobby environments.
